

Homeowner Information

Your HVAC system has been equipped with a Honeywell Fresh Air Ventilation Control (W8150). By working with the HVAC equipment, this product controls the supply of fresh air to your home and helps to meet ventilation codes and standards.

Ventilating can have many indoor air quality benefits, including diluting airborne pollutants and controlling odors.

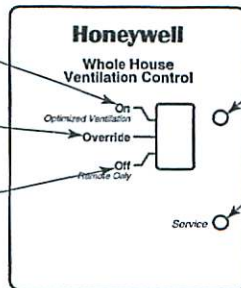

The control settings have been customized for your home. Changing any of the settings may result in inappropriate ventilation cycles and reduce the benefits of this product.

Place this label near the W8150 ventilation control.

On: Recommended setting. Microcontroller intelligently optimizes the ventilation required.

Override: Will ventilate and keep HVAC fan on 100% of the time.

Off: Control will only deliver fresh air based on call from a remote device.

Green light: Indicates that the control is powered and operating normally.

Red light: Indicates that the control is not operating normally. Contact your HVAC contractor to service the unit.
